## CD4015BC Dual 4-Bit Static Shift Register

#### **General Description**

The CD4015BC contains two identical, 4-stage, serial-input/parallel-output registers with independent "Data", "Clock," and "Reset" inputs. The logic level present at the input of each stage is transferred to the output of that stage at each positive-going clock transition. A logic high on the "Reset" input resets all four stages covered by that input. All inputs are protected from static discharge by a series resistor and diode clamps to V<sub>DD</sub> and V<sub>SS</sub>.

#### **Features**

- Wide supply voltage range: 3.0V to 18V
- High noise immunity: 0.45 V<sub>DD</sub> (typ.)
- Low power TTL: Fan out of 2 driving 74L compatibility: or 1 driving 74LS
- Medium speed operation: 8 MHz (typ.) clock rate

October 1987

Revised January 1999

■ Fully static design: @V<sub>DD</sub> - V<sub>SS</sub> = 10V

#### Applications

- Serial-input/parallel-output data queueing
- Serial to parallel data conversion
- General purpose register
